Unhappy			
Goal	Understand health and safety risks for a new role	Prevent mosquito bites and disease transmission effectively each workday	Avoid spreading diseases like Zika to family and partner
Actions	 Searches online for general safety information about his job Attends workplace orientation 	 Applies repellent before going to job sites according to product directions Checks weather forecast 	 Follows basic precautions but lacks clarity on when to get tested or use protection
Thoughts	 Wants to stay safe but lacks details on prevention relevant for daily work Hopes employer provides guidance 	 Finds generic repellent guidance frustrating Wants specific recommendations tailored for his routine and environment 	 Worried he could transmit Zika without realizing Wants explicit testing and transmission guidance
Pain-points	 Employer training lacks disease-specific risks Does not receive alerts based on work location 	 Lacks alerts on disease-specific outbreaks near work Unsure how often he should reapply repellent during shift 	 Misses tailored recommendations on when to get tested Use protection after higher risk workdays.
